### ABSTRACT

The invention is a pickup mounting structure capable of executing with precision, positioning and moving position control of a pickup mounted on a base plate member, even if the thickness of the base plate member is rendered smaller. With the pickup mounting structure, ~~a an-opening~~ substantially rectangular opening ~~in-shape~~ is provided in the central part of a base plate member made of a metal, and a rib is formed around the entire periphery of the opening. A holder formed integrally with the rib is provided in the central part of the opening so as to bridge across the opening, and a cable fixture member made of a synthetic resin is fitted to a flat plate part of the holder, which is rectangular ~~in-shape~~. The cable fixture member is provided with pawls in such a way as to protrude therefrom, and a cable bent substantially at a right angle is fitted among the pawls.
